Professional Summary

Computer Science and Design (CSD) undergraduate with a strong foundation in programming, web development, and problem solving, complemented by working knowledge of UI/UX and product design principles. Proficient in Java and Python with exposure to machine learning and AI-driven application development. Experienced in building full-stack web platforms, AI-powered assistants, and IoT-integrated systems through academic and hackathon projects. Seeking an internship or entry-level opportunity in software development, web development, or UI/UX design to apply technical skills and design thinking to real-world problems.

Education

K S Institute of Technology — Bengaluru, India
Bachelor of Engineering in Computer Science & Design — *2023 – 2027*

Infocus India Public School — Bengaluru, India
CBSE, Class XI & XII — *2021 – 2023*

Projects

Study Material Repository | *Web Development, Authentication, AI Chatbot*
- Developed a role-based web platform enabling teachers to upload and students to access study materials organized by stream and batch
- Implemented secure user authentication and integrated an AI chatbot to assist students with queries

AI Student Mentor (MentorGPT) | *RAG, AI/ML, Python*
- Built an AI-powered learning assistant using Retrieval-Augmented Generation (RAG) to explain notes and topics and recommend relevant video resources
- Designed multi-level quizzes with a live leaderboard to support interactive student assessment

NGO App | *Android Development, UI/UX Design*
- Developed an Android application for an NGO as part of an academic assessment to streamline day-to-day operations
- Designed a user-friendly interface focused on usability to support basic NGO information and operational needs

AI & IoT Wardroom Automation and Healing Rate Analysis | *IoT, Raspberry Pi, AI/ML*
- Built an AIoT-based healthcare system using IoT sensors and Raspberry Pi combined with AI-based wound analysis
- Implemented wound segmentation and healing-rate tracking along with voice assistance and automated doctor alerts

Achievements

National Level Hackathon Winner, MIIT, Mysuru – Developed an AI-driven wardroom automation and wound analysis system to enhance hospital efficiency and patient care

National Level Hackathon Runner-up, KSSEM – Developed an adaptive AI-based automated quiz generator; recognized with a 2–4 month internship opportunity at Dyashin Technosoft

Technical Skills

Programming Languages: Java, Python
Web Technologies: HTML, CSS, Web Development
Database: MySQL
AI/ML: Machine Learning, Model Training, Agentic AI
Concepts: Object-Oriented Programming, Database Management, Software Development, Problem Solving

Soft Skills

Problem Solving, Collaboration, Adaptability, Continuous Learning

Languages

English, Hindi
