Professional Summary

Computer Science and Design (CSD) undergraduate with a strong foundation in programming, web development, and problem solving, complemented by working knowledge of UI/UX and product design principles. Proficient in Java and Python with exposure to machine learning and AI-driven application development. Experienced in building full-stack web platforms, AI-powered assistants, and IoT-integrated systems through academic and hackathon projects. Seeking an internship or entry-level opportunity in software development, web development, or UI/UX design to apply technical skills and design thinking to real-world problems.

Education

K S Institute of Technology — Bengaluru, India
Bachelor of Engineering in Computer Science & Design — *2023 – 2027*

Infocus India Public School — Bengaluru, India
CBSE, Class XI & XII — *2021 – 2023*

Projects

Study Material Repository | ***Web Development, Authentication, AI Chatbot***

- Developed a role-based web platform enabling teachers to upload and students to access study materials organized by stream and batch
- Implemented secure user authentication and integrated an AI chatbot to assist students with queries

AI Student Mentor (MentorGPT) | ***RAG, AI/ML, Python***

- Built an AI-powered learning assistant using Retrieval-Augmented Generation (RAG) to explain notes and topics and recommend relevant video resources
- Designed multi-level quizzes with a live leaderboard to support interactive student assessment

Task Manager | ***Full Stack Development, Flask, PostgreSQL, SQLAlchemy***

- Developed a fully functional task management web application with a frontend built using HTML, CSS, and JavaScript
- Built a backend using Python Flask with SQLAlchemy ORM and a PostgreSQL database for persistent, structured data storage
- Deployed the application to a production-level environment on Render, ensuring reliable hosting and accessibility

AI-Powered Code Analysis & Documentation Platform | ***AI/ML, LLMs, Vector Database, CI/CD***

- Built an AI-driven platform that analyzes GitHub repositories to detect syntax and dependency errors and automatically generates structured documentation
- Implemented semantic code understanding using LLM-based embeddings stored in a Vector Database (FAISS/Pinecone) for intelligent code search and analysis
- Integrated automated validation into CI/CD pipelines (GitHub Actions/Jenkins) to enhance code quality assurance and developer productivity

AI & IoT Wardroom Automation and Healing Rate Analysis | ***IoT, Raspberry Pi, AI/ML***

- Built an AIoT-based healthcare system using IoT sensors and Raspberry Pi combined with AI-based wound analysis
- Implemented wound segmentation and healing-rate tracking along with voice assistance and automated doctor alerts

Achievements

- **National Level Hackathon Winner, MIIT, Mysuru** – Developed an AI-driven wardroom automation and wound analysis system to enhance hospital efficiency and patient care
- **National Level Hackathon Runner-up, KSSEM** – Developed an adaptive AI-based automated quiz generator; recognized with a 2–4 month internship opportunity at Dyashin Technosoft

Technical Skills

Programming Languages:	Java, Python
Web Technologies:	HTML, CSS, Web Development
Database:	MySQL, PostgreSQL
AI/ML:	Machine Learning (Basics), Model Training, Agentic AI, LLMs
APIs:	API Integration, RESTful APIs
Development Tools:	Git, GitHub, Jira
Concepts:	Object-Oriented Programming, Database Management, Software Development, Problem Solving

Soft Skills

Problem Solving, Collaboration, Adaptability, Continuous Learning

Languages

English, Hindi
